# THE REVOLUTION IN CABIN AIR FILTRATION

## NEW FILTRATION MEDIA

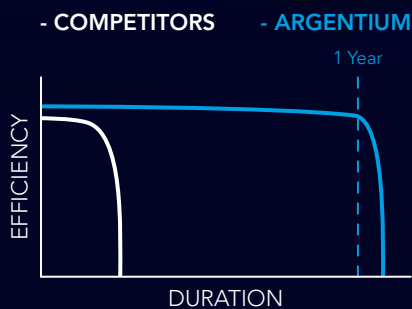

**Argentium** is the new filtering media created by UFI Filters, thanks to its long experience in the research and development of new materials. The revolutionary filtering media is non-woven and incorporates silver particles, with strong antimicrobial properties. **Argentium** keeps its antimicrobial properties during the entire life cycle, unlike products currently available in the market.

**Argentium** offers a clear improvement in the air quality inside the vehicle thanks to a specific combination with activated carbons. This combination guarantees a high filtration efficiency as it absorbs allergens, harmful gases and unpleasant odors and neutralizes bacteria and mould fungi.

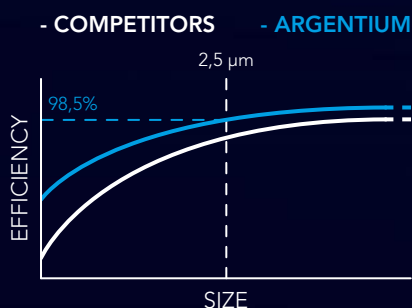

## ONE YEAR PROTECTION

**Argentium's** silver based antimicrobial properties are embedded in the fibres. This makes it unique as the antibacterial efficiency is prolonged in time.

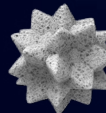

## BLOCKS PM<sub>10</sub> - PM<sub>2,5</sub>

**Argentium** guarantees a filtration efficiency >98,5% for particles with size 2,5µm and >99,9% for particles with size 10µm.

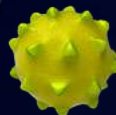

MICROBES

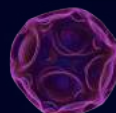

PM<sub>10</sub>

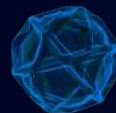

PM<sub>2,5</sub>

ALLERGENS

SO<sub>2</sub>

NO<sub>x</sub>

ODOURS

## ANTIMICROBIC FUNCTION

**Argentium** neutralizes bacteria and mould fungi with **antibacterial capacity >99%**.

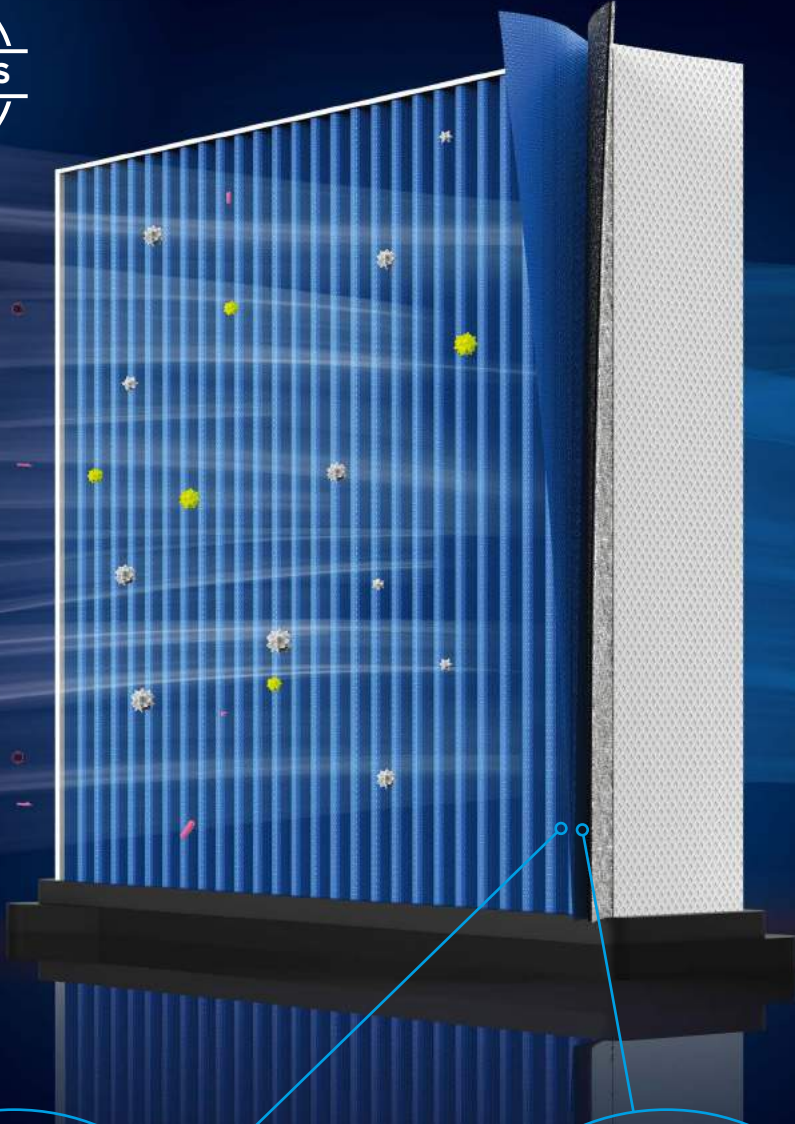

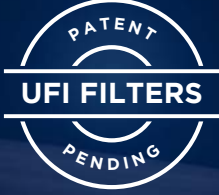

## DEJECTS NO<sub>x</sub> - SO<sub>2</sub>

The specific combination with activated carbons blocks unpleasant odours and harmful gasses such as sulphur dioxide and nitrogen oxide.

# UFI FILTERS INNOVATION

## THE NEW GENERATION OF CABIN FILTER

UFI Filters cares about what you breathe every day inside your vehicle. For this reason, it has employed its researchers for the development of **Argentium**, disruptive technological innovation that marks the beginning of a new generation of UFI cabin air filters.

UFI Filters advises to replace the cabin air filter at least once a year. Missing the replacement interval leads to a poor air quality inside the vehicle. Dust accumulation and pollutants can put at risk the health and general well-being of the driver and passengers, favouring allergies, throat irritation, sneezes as well as tiredness and low concentration after long driving periods.
